SWAPPING TWO NUMBERS USING POINTER

AIM:
Write a program to swap two numbers using pointers.

PROGRAM:

```
#include <stdio.h>
void swap(int *x, int *y) {
   int temp = *x;
   *x = *y;
   *y = temp;
}

void main() {
   int a, b;
   printf("Enter the values of a and b:");
   scanf("%d%d",&a,&b);
   printf("Before swap: a = %d, b = %d\n", a, b);
   swap(&a, &b);
   printf("After swap: a = %d, b = %d\n", a, b);
}
```

LARGEST ELEMENT IN AN ARRAY USING POINTER

AIM:

Write a program to find the largest element in an array using pointers.

PROGRAM:

```
#include <stdio.h>
int Largest(int *arr, int n) {
   int max = *arr;
   for (int i = 1; i < n; i++) {
      if (*(arr + i) > max)
         max = *(arr + i);
   }
   return max;
}

void main() {
   int n,arr[20];
   printf("Enter number of elements: ");
   scanf("%d", &n);
   printf("Enter the elements: ");
   for (int i = 0; i < n; i++)
      scanf("%d", &arr[i]);
   int l = Largest(arr, n);
   printf("Largest element  = %d\n", l);
}
```
